Background

Instant messaging is often preferred to emails and phone calls. In 2017, Calder Library implemented a chat service.

Objective

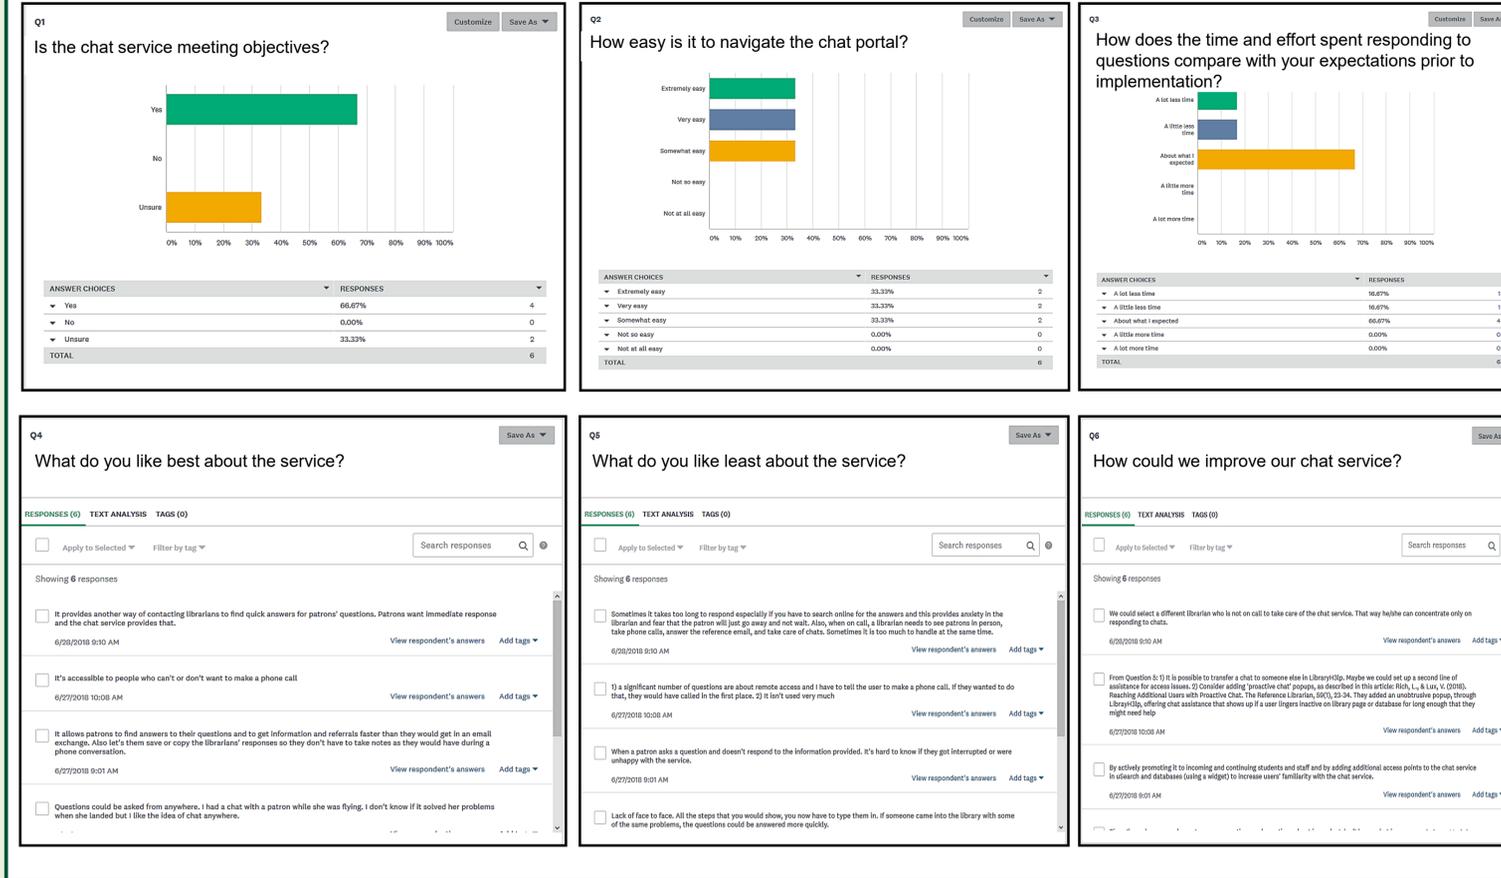

This poster analyzes the impact of the Library's chat service by focusing on provider perspective and usage data.

Methods

A short survey was developed to determine librarians' impressions of the chat service. Additionally, data on numbers and peak chat times, response time, length of conversation, and type of questions were analyzed.

Chat Box

The screenshot shows the 'Ask A Librarian' chat interface. At the top, there are navigation tabs: HOME, MISSION, ASK A LIBRARIAN, FORMS, OTHER LIBRARIES, STAFF LIST, MY ACCOUNT, and PATRON. Below the tabs, the 'Ask A Librarian' title is displayed. On the left, there is a sidebar with 'Library Hours' for October 18, 2018 (7:30 AM - Midnight) and a list of databases including E-Books, E-Databases, All Databases, AccessMedicine, Bates Visual Guide with OSCes, BrowZine, CINAHL, ClinicalKey, Cochrane Library, DynaMed Plus, EMBASE, and EndNote. The main chat area shows a welcome message from the Reference & Education Services Department and a chat window with a librarian's response: '14:06 me Hi im trying to locate an article but i cant get the full text. Do we have it: Balancing Innovation and Safety When Integrating Digital Tools into Health Care, Annals of Internal Medicine, 169(8): 592'. The chat window also shows a timestamp and a '14:06 librarian Hello! Welcome to Calder's Chat Reference! I'll be happy to help with that, but before we get started, could you please let me know your UM/ JMH affiliation?' and another timestamp '14:06 me I am a UM Faculty member.' followed by '14:06 librarian Okay great!'.

Survey Results

Survey responses indicated that **all librarians found the portal easy to navigate** and the time/effort spent responding met their expectations. **Two benefits of the service were (1) patrons received immediate responses and, (2) librarians could create canned responses and greetings.** Librarians least liked the time it took to compose responses that required searches prior to answering. They worried that patrons would tire of waiting and leave the session without an answer.

Analytics

Over a year, the chat service was used **143 times**, with an **average response time of 1m:17s** and an **average conversation length of 7m:45s.**

The busiest day of the week was **Wednesday, which had 25% of all activity.** Furthermore, the number of chat sessions held on Wednesday was 76% higher than the number of chat sessions held on the **least active day of the week--Friday.**

By grouping chat hours into four equal sessions throughout the day (9:00-11:00am, 11:01am-1:00pm, 1:01-3:00pm, 3:01-5:00pm), the **9:00am -11:00am session was most active (30%)** and the **11:01am-1:00pm session was least active (22%).**

Sessions were also assigned two categories, directional or reference; **66% of the questions asked were reference.**

Conclusion

A year post-implementation, the chat service is functioning well and liked by the librarians. **Librarians suggested** several ways to improve the service, including **assigning two librarians simultaneously** and implementing a **'proactive chat' popup.**
