Tools for Nurses: Online Information Resources at University of Miami

Carmen Bou-Crick, M.S.L.S.
Jenny Garcia-Barcena, M.S.L.S.
Last Updated: February 3, 2014
Class Objectives

Upon completion of this lecture, participants will be able to:

• Identify appropriate tools for clinical practice by referring to the Resource Guide for Nursing @ Calder Library website.

• Review some of the most important Clinical Decision-Making Databases and use those resources for patient care and research.

• Keep abreast of new evidence-based findings by doing keyword and advanced searches in CINAHL (Comprehensive Index to Nursing and Allied Health Literature) and creating alerts of new publications.
The Resource Guide for Nursing was created to help nurses find evidence-based diagnosis and treatment options for patients. The resources provide background information, diagnostic tools, drug information, medical calculators, and more...
Resource Guide for Nursing

Faculty Publications
- Short anagen hair syndrome. Herskovitz I, de Sousa IC, Simon J, Tosti A
- Implications of 25-Year Follow-Up of White Matter Integrity and Neurocognitive Function of Childhood Leukemia Survivors: A Wake-Up Call. Armstrong FD

Patient Skin Antisepsis

Why do we remove cosmetics before the preoperative skin prep?

What precautions should providers take when removing hair at the surgical site?

How do I minimize the fire risk when using flammable patient skin antiseptic products?

Which patient skin antiseptic products are flammable?

For a procedure that involves the genitalia, should a urinary catheter be inserted before or after the surgical skin prep?

Why do we remove cosmetics before the preoperative skin prep?

Answer:

Cosmetics may contribute to increased soil and contamination and impede the effectiveness of the antiseptic agent. The removal of facial cosmetics also may be indicated to prevent debris from irritating the eyes, to facilitate securing the endotracheal tube, or for other reasons identified by the surgical team.

Resource

Updated January 28, 2013

Back to top

What precautions should providers take when removing hair at the surgical site?

Answer:

If the presence of hair will interfere with the surgical procedure and removal is in the best interest of the patient, the provider should take the following precautions:

• Hair removal should be performed the day of the surgery, in a location outside the operating or procedure room.
• Only hair interfering with the surgical procedure should be removed.
• Hair should be clipped using a single-use electric or battery-operated clipper, or clipper with a reusable head that can be disinfected between patients.

Search options: by topic, by organization, in progress, index, archive, related National Quality Measures Clearinghouse measures...

Guidelines by Topic

Browse topics to find guidelines represented in NGC that are linked to a particular term derived from the U.S. National Library of Medicine's (NLM) Medical Subject Headings (MeSH), a controlled vocabulary for disease/condition, treatment/intervention, and health services administration. MeSH is one of the controlled vocabularies included within the Unified Medical Language System (UMLS) (what's this?)

MeSH terms are arranged hierarchically ranging from broad headings to more narrow concepts. For example, the general concept "Nervous System Diseases" can be followed through the MeSH hierarchy down to the concept "Myasthenia Gravis, Neonatal;" the broad concept "Diagnostic Techniques, Digestive System" can be followed through "Endoscopy, Gastrointestinal" to the narrow concept "Sigmoidoscopy."

Resource Guide for Nursing: Featured Databases

- **CINAHL**
  A database of the nursing and allied health literature.

- **DynaMed**
  Clinical evidence-based reference with point-of-care summaries for more than 3,200 topics.

- **HealthSTAR**
  HealthSTAR focuses on both the clinical and non-clinical aspects of health care delivery, such as: evaluation of patient outcomes; effectiveness of procedures, programs, products, services and processes; administration and planning of health facilities, services and manpower; health insurance; health policy; health services research; health economics and financial management; laws and regulation; personnel administration; quality assurance; licensure; and accreditation.

- **Micromedex**
  A collection of many different drug databases and several alternative medicine databases. Up-to-date information provided on drugs, diseases, acute care, toxicology, alternative medicine, and more.

- **QUOSA Information Manager**
  Retrieve hundreds of full-text articles in seconds from your PubMed or Ovid search with one click, organize article collections, search across the full-text of the articles you retrieve, and more.

- **PubMed**
  A database of the medical, nursing, and allied health literature; the focus is mainly on the medical literature.

- **RefWorks**
  Organize your references and format your bibliography with a click of the mouse.

- **Scopus**
  See who has cited an article since it was published; see who has cited your articles.

- **UpToDate**
  Clinical decision support tool designed to answer clinical questions that arise in daily practice.

See additional databases in the Drug Information Resource Guide.
CINAHL: Comprehensive Index to Nursing and Allied Health Literature

- *CINAHL Plus* provides indexing for 4,500 journals from the fields of nursing and allied health, with indexing back to 1937. *CINAHL Plus* also contains searchable cited references for more than 1,340 journals. Full text material includes nearly 80 journals plus legal cases, clinical innovations, critical paths, drug records, research instruments and clinical trials.
Creating a Search Strategy using a PICO Question:
For an adolescent boy with *migraine* headaches, is *acetaminophen* better than *ibuprofen* to relieve recurrent headaches?

- **Patient/Problem:** Migraine
- **Intervention:** Acetaminophen
- **Comparison:** Ibuprofen
- **Outcome:** Headache relief
Accessing CINAHL from Calder website
http://calder.med.miami.edu (or from the Resource Guide for Nursing)
Keyword search in “all Fields” (click on drop down box to see other options)
32 Results
Advanced Searching using CINAHL Headings and Subheadings. First click on “New Search”
Click on “CINAHL Headings”
First topic: migraine (Enter “migraine” in text box and click browse)
Select “Migraine” and look at the Subheadings list
Select appropriate subheadings (Drug Therapy, Prevention and Control, Rehabilitation, Therapy) and click on “Search Database”
4,307 Results for Migraine
Second topic: Acetaminophen
First click on “New Search”
Click on “CINAHL Headings”
Enter “Acetaminophen” and browse
Select appropriate subheadings (AD, AE, CT, PO, TU) and click on “Search Database”
3,717 Results for Acetaminophen
Third topic: Ibuprofen (Click on “New Search”)

![Image of a search interface on a computer screen. The interface is from the EBSCOhost database, showing the Advanced Search page with options for searching in CINAHL Plus database. The screenshot includes fields for entering search terms and options for search modes and limit results features. The interface is part of the EBSCOhost Advanced Search - Windows Internet Explorer environment.]
Click on “CINAHL Headings”
Enter “Ibuprofen” then “Browse”
Select subheadings (AD, AE, CT, PO, TU) and click on “Search Database”
1,066 Results for Ibuprofen
To Combine Searches: Click on “New Search” then click on “Search History”
Combining sets in **Search History**: Click on the 3 boxes then click on “Search with AND”

Temporomandibular disorders in adults

Epidemiology

Pathogenesis

Introduction — Temporomandibular disorders (TMD) are common, but they are diagnostically challenging due to the complex anatomy and innervation of the head, face, and neck. TMD is sometimes classified as a subtype of a secondary headache disorder [1]. The common goals of managing temporomandibular disorders are to alleviate pain and improve jaw function.

TMD is associated with substantial morbidity and affects individual work productivity and quality of life. In the United States, it is estimated that for every 100 million working adults, TMD will affect 10 million workers each year.

This topic will review the epidemiology, pathogenesis, clinical manifestations, diagnosis, and treatment of temporomandibular disorders. The evaluation of temporomandibular joint disorders (TMJ) and disc disorders (TMJ Disorders) is also covered.

Epidemiology — The prevalence of and risk factors for temporomandibular disorders (TMD) have been assessed in different study populations. In one survey of adults in the United States, 9.2% reported severe pain in the temporomandibular joint (TMJ) and 6% reporting preauricular pain [3]. Observational studies in patients with TMD have illustrated the following:

- The prevalence of TMD is about 1.5 times higher in women than men [4,5].
- The greatest risk of onset of TMD is between the ages of 16 and 44 [6].
- Non-Hispanic Caucasians have a higher risk for TMD [7]. There does not seem to be an association with socioeconomic group.
- There is an association between chronic TMD and mood disorders and other psychiatric comorbidities [7-10].
- Individuals with rheumatoid arthritis (RA) are more likely to develop temporomandibular pain at some point [11]. The prevalence of TMD in patients with RA ranges from 53% to 81%, with more severe RA (erythrocyte sedimentation rate ≥32 mm/hour) were at increased risk for TMD.
- TMD is weakly associated with teeth grinding (bruxism) [12]. A systematic review showed a slight association between bruxism and TMD symptoms.
- Although not formally studied, gum chewing, pencil biting, pipe smoking, and other repetitive jaw motions (e.g., violinists, singers, and woodwind players), are thought to increase the risk of TMD.

Pathogenesis — For a long time, the cause of temporomandibular disorders (TMD) was attributed to changes in dental occlusion (the alignment of the upper and lower teeth) and there is a structural component to TMD. Other factors include: masticatory muscle, joint, and masticatory head pain, and cognitive factors can play a role in the development of symptoms [13].

Joint trauma — Trauma to temporomandibular joint (TMJ) ligaments, articular cartilage, disc, and bone produces oxidative stress and generates free radicals in the intrarticular space that cause degenerative TMJ disease [14-15]. Joint trauma can result from whiplash injuries, bruxism, or external injuries to the jaw [16]. TMJ disc displacements can also cause pain.

Pain threshold — There is also a subjective component to the perception of TMD pain. Differences in pain modulation have been reported in both women and men with temporomandibular joint pain [17].

- 03/26/2014 — 12:1 p.m. / PubMed en Espanol

MARCH 2014 SEMINARS AT UMH LIBRARY
- 03/05/2014 — 12:1 p.m. / Wednesdays Lunch and Learn
- 03/12/2014 — 12:1 p.m. / Wednesdays Lunch and Learn
- 03/19/2014 — 12:1 p.m. / Wednesdays Lunch and Learn
- 03/26/2014 — 12:1 p.m. / Wednesdays Lunch and Learn

SEMINARS AT UMH LIBRARY
Address: 1450 N.W. 16th Ave, Room 1939, Miami, FL 33136. For additional information, please call 305-849-5737 or 305-243-6843.

SEMINARS ON REQUEST
We now offer group seminars designed specifically for your department. The seminars can be held at the Calder Library e-Classroom (maximum 25 people) or at any other medical campus location. If you are interested in having our librarians teach a seminar for your department, please contact Carman Bivou-Crickett at 305-243-6848 or cbivou@med.miami.edu.
Any questions?
Thank you for attending this seminar!

Contact us at:
Calder Library: 305-243-6648
UMH Library: 305-689-3127

reference@med.miami.edu

Please complete a class evaluation (on desktop) before you leave and let us know how we can make this class better. We appreciate it!
